

*AMENDMENTS TO THE CLAIMS*

This listing of claims replaces all prior versions, and listings, of claims in the application.

1. (Currently Amended) A method of treating a subject who has psoriasis, the method comprising administering a multiple course of treatment of a soluble CD2-binding LFA-3 polypeptide to the subject, wherein the multiple course comprises multiple cycles of treatment, wherein each cycle comprises an administration period of about twelve weeks comprising multiple administrations of the soluble CD2-binding LFA3 polypeptide and an interval between administrations, and a rest period, wherein the interval between administrations is about one week, and wherein the rest period is at least twelve weeks~~substantially longer than the interval between administrations~~.
2. (Previously Presented) The method of claim 1, wherein the soluble CD2-binding LFA-3 polypeptide is an LFA-3 fusion protein.
3. (Previously Presented) The method of claim 1, wherein the soluble CD2-binding LFA-3 polypeptide is an LFA-3/immunoglobulin (Ig) fusion protein.
4. (Previously Presented) The method of claim 1, wherein the soluble CD2-binding LFA-3 polypeptide comprises a soluble LFA-3 polypeptide fused to all or part of an Ig heavy chain hinge region and all or part of a heavy chain constant region.
5. (Cancelled)
6. (Previously Presented) The method of claim 1, wherein the soluble CD2-binding LFA-3 polypeptide is alefacept (SEQ ID NO: 8).
7. (Previously Presented) The method of claim 1, wherein the soluble CD2-binding LFA-3 polypeptide is encoded by an insert contained in plasmid pSAB152, deposited with American Type Culture Collection under the accession number ATCC 68720.
8. (Previously Presented) The method of claim 1, wherein the multiple course

comprises at least four cycles of treatment.

9. (Previously Presented) The method of claim 1, wherein the multiple course comprises at least five cycles of treatment.

10. (Previously Presented) The method of claim 1, wherein the multiple course comprises at least six cycles of treatment.

11. (Previously Presented) The method of claim 1, wherein the multiple course comprises at least seven cycles of treatment.

12. (Previously Presented) The method of claim 1, wherein the multiple course comprises at least eight cycles of treatment.

13. (Previously Presented) The method of claim 1, wherein the rest period of each successive cycle of the multiple course is longer than the rest period of a previous cycle in the multiple course.

14. (Previously Presented) The method of claim 1, wherein the rest period of the last cycle of the multiple course is at least 2 years.

15. (Previously Presented) The method of claim 1, wherein the rest period of the last cycle of the multiple course is at least 3 years.

16. (Previously Presented) The method of claim 1, wherein the administration period of each cycle of the multiple course is at least 8 weeks.

17. (Previously Presented) The method of claim 1, wherein the administration period of each cycle of the multiple course is at least 10 weeks.

18. (Previously Presented) The method of claim 1, wherein the administration period of each cycle of the multiple course is at least 12 weeks.

19. (Previously Presented) The method of claim 1, wherein the polypeptide is administered intramuscularly.

20. (Previously Presented) The method of claim 1, wherein the polypeptide is administered intravenously.

21. (Previously Presented) The method of claim 1, wherein the polypeptide is administered at a unit dosage ranging from 2 to 30 mg.

22. (Previously Presented) The method of claim 1, wherein the method further comprises administering to the subject an additional therapeutic or prophylactic agent during the multiple course of treatment.

23. (Previously Presented) A method of treating a subject in need of treatment for psoriasis, the method comprising administering a multiple course of treatment of alefacept (SEQ ID NO:8) to the subject, wherein the multiple course of treatment comprises at least three cycles of treatment, each cycle of treatment comprising an administration period of once-weekly administration of alefacept (SEQ ID NO:8) for 12 weeks, followed by a rest period of at least 12 weeks.

24. (Original) The method of claim 23, wherein the multiple course of treatment comprises at least four cycles of treatment.

25. (Original) The method of claim 23, wherein the multiple course of treatment comprises at least five cycles of treatment.

26. (Previously Presented) The method of claim 23, wherein the method comprises evaluating the subject for the effects of alefacept (SEQ ID NO:8) during one or both of the administration period and the rest period of each cycle in the multiple course.

27. (Original) The method of claim 23, wherein the method further comprises

administering to the subject an additional therapeutic or prophylactic agent during the multiple course of treatment.

28. (Original) A method of treating a subject having psoriasis, the method comprising (a) selecting a subject on the basis of having had at least two cycles of treatment with a soluble CD2-binding LFA-3 polypeptide and (b) administering a third cycle of treatment of a soluble CD2-binding LFA-3 polypeptide to the subject.

29. (Previously Presented) The method of claim 28, wherein the soluble CD2-binding LFA-3 polypeptide is alefacept (SEQ ID NO:8).

30. (Cancelled)
